CHRYSANTHEMUM

Arcticum Hybrids

One of the foremost hybridizers in the United States has developed many new and beautiful hybrids of *Chrysanthemum Arcticum*. The ones we present have been selected from hundreds of successful crosses and represent the finest of the lot. *Chrysanthemum Arcticum* is noted for its extreme hardiness, the beauty and vigor of its foliage, its resistance to disease and insects, and the length of its blooming season. By crossing *Arcticum* with some of the finer hardy *Chrysanthemums*, we are enabled to present these varieties with every assurance that they are extremely hardy in any section of the country, that the foliage is of long lasting beauty, the flowers are of exceptional quality and we can characterize all of these varieties as being virtually fool-proof. Full description of all of these varieties will be found on page 6.

SCHLING'S MAXIMA GRASS SEED MIXTURES

A grass seed mixture may be offered under any brand name. However, regardless of the name, the basis of all good grass seed mixtures must necessarily be the same. The important feature of a good mixture is that it contains heavy, plump seeds from selected grass stocks that have been grown for the distinct purpose of seed production. Careful blending plays its part in the compounding of a high class grass seed mixture. We have prided ourselves upon the super-quality of our grass seed mixtures which have established a reputation in the past 25 years.

Schling's Maxima Special Lawn Mixture. This mixture is especially designed for all ordinary lawn purposes. Weighing 32 pounds per bushel, its quality is sufficiently high to challenge the foremost brand mixtures offered by any seed house. Lb., 80c; 2 lbs.,

\$1.50; 5 lbs., \$3.50; 10 lbs., \$6.50; 25 lbs., \$16.00; 100 lbs., \$60.00.

Schling's Maxima Shady Nook Mixture. Years of successful usage have proved to us that our formula for this mixture is correct. This mixture will produce a rich, velvety greensward even in fairly dense shade. Lb., 90c; 2 lbs., \$1.75; 5 lbs., \$4.00; 10 lbs., \$7.50; 25 lbs., \$17.50; 100 lbs., \$65.00.

Wild White Clover. A comparatively recent introduction of this strain of Clover. It is very vigorous and of a thick, dwarf growth. An important feature is its lack of flowers which is a great advantage in maintaining a green lawn. Wild White Clover is more vigorous than any weed, and because of its all around excellence we recommend its use in the finest lawns whereas in the past we have never recommended the use of ordinary Dutch White Clover except for specific purposes. 1 lb. is sufficient for 800 sq. ft. 1 lb., \$2.50; 5 lbs., \$11.00.

Summer Flowering Bulbs

Too little emphasis has been laid upon the importance and beauty of summer-flowering bulbs. Their main advantage lies in the fact that empty spots in the garden and border may be planted quite late in the season with summer-flowering bulbs for midsummer and late summer beauty.

Ismene calathina, blooming six to eight weeks after planting, is one of the most gorgeous garden flowers in existence.

Tuberous-rooted Begonias, for shaded places, provide exotic flowers.

Montbretias and Tigridias are of great importance and if they have never been grown before they should receive your consideration.

Fancy-Leaved Caladiums provide a most outstanding show in semi-shaded places for the entire summer, and

Tuberose are highly prized for their intense and delightful perfume.

Hyacinthus candicans, the summer Hyacinth, is most attractive planted in the hollow spots of the perennial border.

Remember that most summer-flowering bulbs can be planted from April to July.

THE FAMOUS SOWRITE SEED SOWER

For many years Max Schling's famous Sowrite Seed Sower has been an indispensable boon to meticulous gardeners who like to obtain the greatest benefit from the seeds that they have purchased.

Particularly invaluable in sowing fine seeds such as Petunia, Snapdragon, Begonia, etc. Properly manipulated a Sowrite will enable the grower to actually drop single seeds wherever it is desired to place them, and enables amateur growers to sow seed with the same skill as the professional.

A Message . . .

TO AMERICAN GARDEN LOVERS

With the Nation at war every American, man, woman and child, eagerly welcomes an opportunity to share in our Nation's war effort.

It cannot be the privilege of all to bear arms or to produce them, nor is it the privilege of all of us to work in a capacity directly connected with the war effort. Civilian economic life must go on.

Our most direct contributions are:

1. The purchase of War Bonds and Stamps.
2. Thoughtful conservation of necessary material and public services.
3. Victory Gardening for food and morale.

The creation of beauty and the production of food in the home garden are a great contribution for they relieve the farm labor shortage, lighten the Nation's transportation burden; and the by-product of home vegetable production, home canning, can and will help to conserve precious metal.

Flowers provide the beauty necessary to the maintenance of morale at home. Indirectly it can assist in the maintenance of the morale of our boys overseas. A snap-shot of the beauties of the home garden sent to our fighting men abroad would, by its nostalgic effect, augment the fighting spirit of our boys and reestablish a desire in them to get it over and done with as soon as possible so that they can return to the home that they love and are fighting to defend.

There is no physical activity that can do more good than gardening, especially in these times, for it is a healthful and invigorating hobby. Whether you garden for food or for fun, its contribution to our war effort, indirectly or not, is a wholesome one.

Garden beauty and the practicality of home grown vegetables are a part of the American tradition. Make vegetables of your own growing the symbol of your determination to win the war. Let a garden full of flowers be your prophecy of peace.

Respectfully yours,

Presenting All-Time

The firm of MAX SCHLING Seedsmen, Inc., has decided after 10 years of All-America Selections that we would like to name an All-Time All-America Selection of our choosing of annual flowers.

These selections have won assorted awards, some no awards at all, since 1933, and some of them were introduced prior to the institution of the All-America Council.

We have not been influenced by any awards given previously to these selections. Their placement on our all-time All-America Selections has been judged solely on their all-around merit as annual flowers that should be in every garden and deserving of consideration before any other annuals are considered.

In judging for all-around merit, we have taken these factors into consideration:

1. Blooming quality

- a. Length of blooming season
- b. Prolificness
- c. Substance of flowers
- d. Desirability of color

2. Growth

- a. Vigor
- b. Resistance to disease
- c. Ability to withstand transplanting
- d. Excellence of foliage

3. Versatility

- a. Beauty of bloom
- b. Acceptability as cut flowers
- c. Desirability as garden show flowers
- d. Desirability as bedding and window box plants

MAX SCHLING PRESENTS SIX NEW HARDY CHRYSANTHEMUMS

Some of our most popular varieties of hardy Chrysanthemums have proven quite tricky in that they lack extreme hardiness under all climatic conditions. The foliage appears to burn and falls off and the flowers are of insufficient substance, and the first light frost discolours the bloom beyond recognition.

There has been a long-felt need for a race of hardy Chrysanthemums that not only retain the beauty of their foliage and flowers after frost, but are absolutely hardy under all climatic conditions, and are of such sturdy and vigorous growth that staking is not required.

We predict that these 6 Arcticum Hybrids will be the forerunners of the most popular strain of hardy garden Chrysanthemums.

ARCTIC QUEEN. Large, Daisy-like blooms with several rows of broad petals on strong stems. A beautiful, bronzy yellow suffused with salmon. Foliage absolutely disease-resistant. Perfectly fool-proof and makes a splendid cut flower of great lasting quality.

CORAL SEA. Dwarf spreading habit, plants are literally covered with hundreds of blossoms until the most severe killing frost. Flowers are double, of decorative type, the color a salmon-buff suffused with coppery rose softening to creamy salmon when the flowers are open. Hardy in sub-zero climate. Disease resistant. Very valuable for low borders and rock gardens.

DUBONNET. A lovely autumn color. Single amaranth-pink with beautiful glossy foliage. Insect and frost resistant.

POLLYANA. The large, graceful single blossoms resemble a Gerbera or Transvaal Daisy on stems 2½ ft. high. The color is a luminous Mayflower-pink with a sheen of rosy salmon. Delightfully different from all other garden Chrysanthemums. A very vigorous grower clothed with beautiful foliage. Absolutely hardy and disease and insect resistant. An ideal cut flower variety.

WHITE CLOUD. Pure white, double blooms produced profusely in September. Not as hardy as the other Arcticums but extremely valuable because of the scarcity of good double white hardy Chrysanthemums.

WINSOME. All of the disease resistant and hardy attributes of the other varieties. The color is a superior soft peach-blossom-pink. Extremely free flowering.

Strong 2½-in. pot-grown plants, 75c each; 3 for \$2.00; \$7.50 per doz.

COLLECTION: 1 each of the 6 varieties, \$4.00. 3 each of the 6 varieties, \$11.00.

Chrysanthemum, Coral Sea

Flowers of Special Merit for 1943

ASTER, Extra Early Giant Crego, Navy Blue

All-America Honorable Mention, 1943. Extremely valuable inasmuch as it is the only real early Aster of the true ostrich plume type. The color is a deep, intense blue and large 4-inch flowers can be had on stems 10 to 12 inches long. Very good branching habit and a splendid addition to the cut-flower garden. 50c per pkt.; 5 pkts., \$2.00.
2 1/4-inch pot plants can be supplied in May at 6 for \$1.50; \$2.75 per doz.

COSMOS, Giant Sensation Dazzler

All-America Honorable Mention, 1943. A very rich, deep crimson. Flowers 3 to 4 inches across on stately stems. This is a distinct improvement over all other red Cosmos and its long blooming period from early July until frost makes it extremely valuable. 50c per pkt.; 5 pkts., \$2.00.

CYNOGLOSSUM Amabile, Pink

A lovely new addition to the Chinese Forget-me-not family. Last year we presented a white which has met with great approval. The pink should prove equally satisfactory and will provide a supplementary flower to be used in combination with larger flowers for exquisite cut-flower arrangements. 50c per pkt.; 5 pkts., \$2.00.

MARIGOLD, Honeycomb

We predict that this Marigold by its unusual formation of petals will be one of the most popular for many years to come. The flower looks just as it is named, a perfect miniature mound-shaped honeycomb. The color is a rich, glowing orange and the foliage is odorless. Marigold Honeycomb can be used with equal effect in the cutting garden or as a bedding flower inasmuch as the height rarely exceeds 15 inches. Our own rating gives this Marigold a high score. 50c per pkt.; 5 pkts., \$2.00.

2 1/4-inch pot plants can be supplied in May at 6 for \$1.50; \$2.75 per doz.

MARIGOLD, Sunkist

All-America Silver Medal, 1943. An early flowering dwarf Marigold that is far superior to anything offered in this class. The flowers are fully 2 inches in diameter with lovely crested centers of dainty tubular petals and the color is a rich, deep, golden orange. While a very dwarf plant generally recommended for bedding, the flowers will be ideal for cutting and can be used in all sorts of table arrangements of cut flowers. Really a splendid addition to the extensive Marigold family. 50c per pkt.; 1/8 oz., \$1.00.

2 1/4-inch pot plants can be supplied in May at 6 for \$1.50; \$2.75 per doz.

PETUNIA, All-Double, America

All-America Silver Medal, 1943. A fine double Petunia that has a double distinction. Not only is it the first of double Petunias developed in the United States, but it is a Petunia of great excellence. While the flowers are not as large as the World Beauty types, nevertheless the habit of the plant is ideal. The flowers are medium sized and the color is that shade of pink that is very attractive for bedding and cutting. We predict that this Petunia will be almost standard for window box and bedding work. Our trials show that it blooms freely from early summer to frost. Our own generous size packets, 75c each; 3 for \$2.00.

3-inch pot plants can be supplied in May at 6 for \$1.75; \$3.25 per doz.

PETUNIA, English Violet

All-America Honorable Mention, 1943. Recommended for its true violet color and its 100 per cent purity. Plants grow to a height of 15 to 18 inches and make a splendid bedding Petunia. Very free flowering. Will possibly supplant Blue Bedder as the most popular blue Petunia. Pkt., 50c; 5 pkts., \$2.00.

PETUNIA, Igloo

All-America Bronze Medal, 1943. A dwarf, compact and uniform pure white with slight yellow in the throat. This Petunia is ideal for borders and bedding because the plant maintains its height of 10 inches and compact form the entire season. The flowers are 2 inches across and will lend themselves admirably to a red, white and blue color scheme for Petunia beds. Pkt., 60c; 3 pkts., \$1.75.

AGERATUM

DWARF BLUE BEDDER. A dwarf, compact, large flowered Ageratum that is uniform in habit and flower size. The color is a deep lavender-blue. The outstanding feature of this new Ageratum is that it closely approaches the fine florist varieties that were formerly obtained by stem propagation only. Beautiful in combination with Marigold, Melody. Pkt., 50c; 5 pkts. for \$2.25.

ANTIRRHINUM

(*Majus Grandiflora*)

REVEILLE. (Rust-Resistant.) Without doubt the finest yellow Snapdragon ever offered. The color is a deep luminous yellow toning to a lighter lemon-yellow. The spikes are enormous, averaging 18 to 22 inches in length. The individual florets are unusually large and are tightly grouped on the flower spike. Pkt., 75c; 3 pkts. for \$2.00.

ASPARAGUS

LACY VEIL. A very highly decorative form of hardy Asparagus that will provide a revelation in screening portions of the garden as well as supplying a continuous amount of beautiful lacy foliage for indoor decoration as well as greens for cut flower arrangements. 6-ft. sprays can be obtained after the planting is established for one year. We recommend this especially for screening off sections of the yard that are reserved for laundry purposes, also to act as a screen separating the vegetable garden from the flower garden. There are so many purposes for which this marvelous plant can be utilized that it would be impossible to enumerate them. Price per pkt. of 50 seeds, \$1.00; 100 seeds, \$1.75; 250 seeds, \$3.00.

COSMOS, Double Sensation Type

IN SEPARATE COLORS

Since the introduction of the Double Sensation type there has been a steady demand for these fine Cosmos in separate colors. It is now our pleasure to offer these in two colors, both of which represent an improvement over their counterparts heretofore offered in mixture.

PEERLESS PINK LADY. Two forms of double flowers are found in this strain. One is a fluted type and the other a crested type. The fluted type is a deeper shade of pink than the crested.

PEERLESS WHITE CLOUD. Beautiful soft velvet-white. Originators claim on trial 65 per cent double. Percentage of double flowers occasionally depends upon the growing season and is quite variable.

Price on each of the above: Pkt., 75c; 3 pkts. for \$2.00.

COSMOS, Semi-Double

ORANGE RUFFLES. A distinctly semi-double type of the most popular Orange Flare Cosmos. This new variety is a distinct improvement over the existing strains of Orange Flare in that even the single flowers that appear are more vigorous and more intense in color. Pkt., 50c; 5 pkts. for \$2.25.

2 1/4-inch pot plants can be supplied during late April and May at 6 for \$1.10; \$2.00 per doz.; \$15.00 per 100.

COSMOS, Yellow Flare

All-America Silver Medal Winner, 1942. One of the color breaks that flower lovers everywhere have been most anxiously waiting for. It is the first and only yellow Cosmos in cultivation. A seedling of the ever-popular Orange Flare. It is a very early bloomer and will continue blooming throughout the entire season. Flowers about 2 1/2 inches in diameter. Height 3 feet. Pkt., 50c; 5 pkts. for \$2.25.

DIMORPHOTHECA

DOUBLE HYBRIDS. (Double African Daisies.) One of the most outstanding novelties for 1942. Was not entered in the All-America Trials due to the fact that it is offered in mixture only. The new double Hybrids begin blooming when they are very young plants and continue blooming throughout the entire summer. The color ranges from salmon-orange to white with many lemon and bisque shades. The originator claims approximately 65 per cent double crested plants with an additional percentage of semi-doubles. Pkt., 75c; 3 pkts. for \$2.00.

GAILLARDIA, Double Annual

FIESTA. A very fine mixture of annual Gaillardias carrying large, fully double flowers 2 1/2 to 3 inches across. Smoky bright red tipped brilliant yellow. Plants 2 1/2 feet tall. A marvelous cut flower. Pkt., 50c; 5 pkts. for \$2.25.

SALVIA *Welwyn*

AN EXCLUSIVE SCHLING FEATURE
IN FOUR NEW COLORS

An exclusive Schling introduction. We are indeed proud in having the privilege of presenting the splendid new colors of Salvia Splendens that were produced on the Estate of Mrs. Harold I. Pratt, "Welwyn," at Glen Cove, Long Island, through the tireless efforts of the superintendent, Mr. George Ferguson. The ability to develop a distinct color break in Salvia and to maintain its purity so that it actually reproduces itself 100 per cent true from seed is an excellent example of horticultural craftsmanship.

WELWYN PINK. A pure, clear salmon-pink, blending in with any planting.

WELWYN WHITE. A pure, glistening white, particularly attractive for planting among Evergreens, Boxwood and for clump planting in broad expanses of lawn.

WELWYN PURPLE. Presents a unique color for combination effect, particularly so with red and white Salvia.

WELWYN MAHOGANY. Is in a class by itself and can be used to tone up any garden or park planting.

WELWYN LILAC. A true lilac shade.

Schling's Famous ANNUAL WILD GARDEN MIXTURE

It is our wish that we would have sufficient space to list all of the testimonials that we have received in praise of this marvelous seed value. We have received reports from all sections of the country extolling the beauty and practical results obtained from sowing this mixture. Carefully blended to strike a perfect balance between the showy bright annuals and those of more subdued tendencies, the result provides a bold effect where required and a vista of real beauty covering large areas where it would be impossible to intensely cultivate a garden. Left to themselves, the vigorous hardy annuals in this mixture self-sow and it can be safely said that a wild garden produced from this seed will be more or less permanent. Oz., 25c; 1/4 lb., 75c; 1 lb., \$2.25.

Long-Lasting Cut Flowers

SCHLING'S SUPERB ASTERS

Wilt-Resistant Varieties Only

Asters bloom profusely during August and September. To be able to cut abundantly and over the longest possible period, you should make several sowings of the early-, medium- and late-flowering types. The soil should be rich and deeply dug. Set plants of the early varieties 10 inches apart and those of the later varieties 12 to 14 inches apart. The second sowing can be made in a cold frame or in a seed-bed outdoors the latter part of April, and the third sowing the latter part of May.

Schling's Magnificent PETUNIAS

No flower has achieved such rapid popularity as have Petunias within the past decade. The splendid attributes of all classes of Petunias have captivated the hearts of all gardeners, amateur and professional, and they have supplanted a great many of the old favorites such as Geraniums, Salvias, Vincas, etc., as bedding and window box plants.

Only lately have they been recognized as splendid cut flowers. Petunias are so prolific that proper culture requires frequent trimming of the plants so that cutting the blooms not only provides a splendid source of cut flowers, but aids the general growth of the plant as well. Petunias are impartial. They will grow anywhere, in semi-shade or in hot, dry sunny locations. The list as represented below embraces the finest selection of Petunia varieties that have been tested for their beauty and prolific bloom and excellent growing habits.

Seeds of Hardy Flowers

PERENNIALS and
BIENNIALS

HOW TO GROW THEM. Hardy plants (perennials) bloom the second year from seed and are permanent thereafter. Some of them may bloom the first year if the seed is sown very early. Among the perennials we find some of the most beautiful flowers for cutting and many of the old-fashioned sorts dear to our childhood memories. A hardy border properly planned and planted is a source of joy from early spring to late autumn; during that period it will be resplendent with color and yield an abundance of bloom for indoor decoration. The plants need little attention other than to be kept free from weeds and given an occasional top-dressing of plant-food.

WHEN TO SOW. Seed may be sown in a hotbed in February or March, or out-of-doors from the first days of May to mid-August. It is well to sow as early as possible, thus permitting the plants to become strong and well established before winter.

WHERE TO SOW. For most perennials a cold frame is an ideal place for starting seeds, but if you do not have one, make a seed-bed of finely sifted light soil, adding and mixing thoroughly well-decayed manure, humus, or prepared plant-food. Sow the seeds in shallow drills, covering $\frac{1}{8}$ inch or more, according to the size of the seed, but very fine seed should only be lightly pressed into the soil.

CARE OF SEEDS AFTER SOWING. Press down the bed with a flat board, and water gently but thoroughly with a fine spray. Do not permit the soil to become dry while the seed is in process of germination, for until the plant develops roots its life depends entirely on moisture. Nearly all failures in growing perennials may be attributed to drying in the seed-bed, which should be carefully watched and watered until the plants have made four to five leaves.

CARE OF PLANTS AFTER GERMINATION. Most seeds will germinate in from eight to fourteen days, but others may need a month or so; therefore do not become impatient. If seedlings come up very thickly, pull out some and transplant to boxes or other seed-beds; later they may be set out in the permanent place. Transplanting should be done before October 1st, to permit the plants to become established before frost. Mulching the plants with leaves, salt hay, or peat moss about the middle of December is a distinct advantage. The leaves and hay must be removed in spring, but the peat moss may remain. Full cultural directions will be found on each packet of Schling's seeds.

HARDY FLOWER SEED

Everybody wants perennials in generous measure, to secure effects in color and charm. If you delay and finally buy plants, an attractive perennial border may require several hundred dollars' worth of plants.

Exactly the same results can be secured with \$10 to \$15 worth of Seeds! And aside from the money-saving, you have the fascination of growing your own plants, nursing them from the beginning, and loving them all the more! **Sow your seeds now, and the plants will bloom next year.**

Vegetable Seed Novelties for 1943

With the institution of the Victory Garden Campaign last year a great many gardeners who confine their activities to the raising of flowers and ornamental plants swung into vegetable growing with varied results, many satisfactory. As was to be expected many errors were made, but errors that can be easily rectified another year.

To those who did not attempt vegetable growing last year we wish to state that there is a great deal of fun in the production of beautiful and palatable vegetables. Let it also be remembered that vegetables of home garden quality can rarely, if ever, be purchased. The reason for this is that varieties of great flavor are often not satisfactory for commercial shipping purposes and in a great many instances the flavor of the varieties of the commercially grown vegetables has been sacrificed in the interest of tougher shipping qualities.

A SPECIAL LIST OF HIGH VITAMIN VEGETABLES

BEEF, LUSCIOUS GREEN TOP. A variety of Beet that is grown primarily for its bright green tops that are prepared the same as Spinach. These leaves are not only more palatable and more highly satisfying than ordinary beet tops, but they contain a higher percentage of vitamins. The root is a pink type that is quite satisfactory as an all-purpose Beet. Pkt., 20c; oz., 50c; 1/4 lb., \$1.50.

MUSTARD SPINACH, TENDERGREEN. The famous mustard greens of the South in an improved form. A real tangy green vegetable that can be prepared in many ways to make it increasingly palatable. One of the highest vitamin-bearing vegetables. Resistant to heat and drought. Pkt., 20c; oz., 50c; 1/4 lb., \$1.50.

TURNIP, SEVEN TOP. This is the variety of Turnip green that is used in making the famous "pot likker" of the South. Accredited as being the highest vitamin content vegetable. **This Turnip is grown for its tops only.** Pkt., 15c; oz., 40c; 1/4 lb., \$1.25.

Special Collection of Vitamin Greens

Pkt. each of the 3 varieties, 50c.
1 oz. each of the 3 varieties, \$1.25.
1/4 lb. each of the 3 varieties, \$4.00.

Something Entirely New! A SUCCESSION OF SWEET CORN

Introduced by us last year, this marvelous collection met with instantaneous approval. The results obtained last season were a source of great satisfaction. Many years ago we introduced our famous Long Season Pea Collection. Now, we take pleasure in presenting our Long Season Hybrid Sweet Corn Collection. As a result of experiments conducted by the Connecticut Experiment Station, which is the leading authority on Hybrid Sweet Corn in the United States, we are able to offer a collection of 5 varieties of Hybrid Sweet Corn which will bear in constant succession for a period exceeding 4 weeks with no two varieties ripening together. In order to continue the season after the collection has ripened we advise successive plantings of Golden Cross Bantam which is the latest variety in the collection and which can be planted with safety up until July 1st.

Each one of these varieties has been chosen for its wilt-resistant qualities, heavy-bearing propensities and fine flavor. For this reason we can offer this collection with absolute assurance in the fact that these varieties can be classified as **wilt-resistant — heavy-bearing — excellent flavor.**

Spancross 4.13. Extra-early.
Marcross 13.6. Early.
Carmelcross 39.13. Early midseason.
Whipcross (Lincoln) 39.23. Midseason.
Golden Cross Bantam. Late midseason.

Method of Handling

At the time when you usually sow your early Sweet Corn, arrange to plant the entire collection together. Every 2 weeks thereafter plant an additional quantity of Golden Cross Bantam until the latest possible date.

COLLECTION OFFER

1 pkt. each of the above 5 varieties (trial quantity)	\$1.00
1/2 lb. each of the above 5 varieties (sufficient for family of four)	2.25

FLAVOR-RITE BEANS

Dwarf or Bush Green-Podded

Culture. Beans grow well in any good garden soil. Usually the first planting can be made the last week in April, followed by successive plantings about two weeks apart until August 15. Open a drill 2 inches deep and drop the Beans 1 inch apart and cover. When well up, draw the soil up against the plants and cultivate frequently. Do not cultivate them when the dew is on the plants, as this frequently causes rust. **One pound of seed is sufficient for 50 feet of drill.**

Plentiful. All-America Bronze Medal. An improved Bountiful type. Strong, productive plants, light green, straight flat pods entirely stringless and of excellent flavor. Pkt., 20c; 1/2 lb., 40c; lb., 75c; 2 lbs., \$1.35.

Pole Lima Beans

Where poles can be secured, these Beans are more productive than the Bush varieties. Set poles 3 feet apart, enrich the soil in the hills by mixing with it a liberal supply of fertilizer or well-rotted manure. Do not plant until the ground is warm.

One pound will plant 50 poles.

LEVIATHAN EXTRA-EARLY. Earliest Pole Lima, and a very heavy bearer. Pods 5 to 6 inches long, with Beans of delicious flavor. We recommend it as the most prolific Pole Lima Bean. 1/2 lb., 30c; lb., 55c; 2 lbs., \$1.00; 8 lbs., \$3.50.

Lima Beans, Dwarf or Bush

Bush Limas are nearly 2 weeks earlier than Pole Limas. The seed is quite tender, and will rot while the ground is cold or wet, so do not plant before the ground is warm. For very best results, however, the seed can be started in pots in a hotbed or in the greenhouse and the plants set out when the weather is settled. Plant in rows 3 feet apart and from 4 to 6 inches apart in the row, always edgewise, with the eye down.

One pound will plant a row 50 feet long.

Schling's Luscious Peas

Do You Know This Secret?

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July? It is easy to get big crops of luscious juicy Peas "falling right over one another," in steady succession even up to late August—if you learn this secret:

Instead of planting at 2- to 3-week intervals, get the following picked varieties and plant all at once in early spring, **the moment the ground can be worked.** This will allow a good root-system to develop before hot weather comes. The varieties will bear in the order shown below (and pictured opposite), beginning about June 20 and keeping up a steady succession of big mouth-watering crops until late August.

Schling's "Long Season" Pea Collection

IMPORTANT. All varieties in this Collection must be planted at one time as early in the spring as the ground can be worked.

Our famous ever-bearing collection has undergone a complete revision this year. Tests have proven to us that varieties of recent development have superior qualities over some of our old favorites. With the exception of the last two varieties in this collection, (which could not be replaced), we offer a new revised garden pea collection.

Schling's Exquisite Hardy Garden Lilies

Schling's exquisite hardy garden Lilies have earned for themselves the right to occupy an important place in every garden. Not only are they highly prized for their magnificent colorings and superb perfume, but mass plantings create such a beautiful effect that they may be rightly termed Queen of the Garden. If planted in a well-drained location, they will provide many years of genuine garden enjoyment.

Due to the treacherous attack upon us by war-crazed Japan, we are unable to present a great many varieties of Lily bulbs of which were usually imported from that country. The varieties are *Lilium Auratum*, *Speciosum Album*, and, to a certain extent, *Lilium Henryi*. We are omitting the listing of the first two varieties altogether and we can offer a limited quantity of *Henryi* of American-grown stock.

Due to the defection of these popular Lilies the demand for American-grown varieties has been far greater than normal and our suggestion is to place your order as early as possible for whatever Lilies we have listed. We are particularly fortunate in being able to list a fine stock of Regal Lilies. *Madonnas*—order now for September delivery.

Schling's Famous Madonna Lilies, *Lilium Candidum*

Schling's Approved Gladiolus

Without exception there has been no garden flower which has been so thoroughly and consistently improved in the past decade as the Gladiolus. It is within the memory of almost every Gladiolus lover when a spike measuring 12 inches in bloom with the blooms averaging 2 inches in diameter was considered the last word in Gladiolus blooms. Today it is not unusual to find varieties with blooming spikes averaging well over 30 inches with individual florets up to 6 inches in diameter. In addition to the increase in size, color developments have been made combining practically every color known to man in a wealth of selection embodying two-tone and solid colors.

Schling's approved Gladiolus as listed are a top selection made by experts. It will be noted that a great many of our varieties have been listed by eminent Gladiolus Societies as the best in their color class. We warrant that our bulbs are plump, over-sized grading, thrip-treated and thrip-free.

Notes On Gladiolus Culture

WARNING! It is our sincere advice to you not to attempt to grow Gladiolus unless you are prepared to spray regularly throughout the growing season. We recommend the following formula:

1 Lb. of Tartar Emetic or Paris Green
4 Lbs. of Brown Sugar to 25 Gallons of Water

Price of Tartar Emetic: 1-lb. containers only—\$1.50 per lb.
Price of Paris Green: 4-oz. package 25c; 1-lb. package 60c.
Price of Corrosive Sublimate: 4-oz. package \$1.50; 1-lb. package \$5.50.

Will control as well as prevent any thrip infestation. This formula can be made up in any quantity using the same proportions. If you are planting old bulbs, we advise the following treatment: submerge the bulbs in a solution of 1 oz. of Corrosive Sublimate (Bichloride of Mercury) to 7½ gallons of water. Submerge bulbs before planting and they may be planted while still moist. Bulbs should be submerged at least two hours.

Rosa Rouletti

The World's Smallest Rose

This tiny Rose, the smallest in the world, is unsurpassed as a pot plant, as a rock garden specimen, or as an edging to a bed of larger Roses. The tiny pink buds, 1/4 inch long, open to perfect little Roses of a tender shade of pink; the flowers are double and are freely produced all season. Plant in poor soil and the little plants will not grow over 6 inches tall; they are perfectly hardy outdoors. 75c each; \$7.50 per doz.

CULTURE OF ROSES

Roses grow best in a rich garden loam deeply dug and well enriched with well-rotted cow-manure or bonemeal. On receiving the plants, open the bundle and immerse the roots in a pail of water. Remove each plant from the pail only after the hole is dug and you are ready to plant. Dig a hole sufficiently large to accommodate the roots, and pour a half pail of water into the hole; in filling, shake the plant lightly so that the soil may fall evenly all around the roots; this prevents cavities. The "bud" should be 1 to 2 inches below surface of soil. Firm the soil well around the plant and hill up with soil to a height of 8 to 10 inches at once. After the ground is thoroughly frozen, cover with leaves, salt hay, or straw. Bush Roses can be set 1 1/2 feet apart, climbing varieties from 4 to 6 feet apart.

THE WORLD'S FINEST ROSE SPRAYS

Two Combination Sprays that combine all of the necessary chemicals for the control of every disease and insect that Roses are heir to. We recommend each of these impartially. They have all been tested and found most satisfactory.

ACME. Scientific Rose Spray. Grow beautiful roses and other flowers with the Acme System of Spray Treatment combining 3 necessary elements (packed separately) to solve the entire spraying problem. NO other sprays needed. Combats both insects and blight. No. 3, 12 qts., 95c; No. 6, 24 qts., \$1.50; No. 24, 96 qts., \$4.00; No. 48, 48 gals., \$6.00; No. 96, 96 gals., \$9.75.

LUCKY STRIKE ROSE KIT. No. 1, \$1.00; No. 2, \$2.00; No. 3, \$3.50; estate size kit, \$10.00.

Use Schling's Selection of the Latest Improvements in Spraying and Dusting Material

ACME INSECTICIDES, SPRAYS and DUSTS

In addition to our regular line of insecticides, etc., we offer a complete list of the Acme Sprays, insecticides and dust, which we sell with absolute confidence.

There have been many changes in the availability of insecticides since last year due to the Federal restrictions on the uses of Rotenone, Pyrethrum, copper, etc. Insecticides using Rotenone that have been made up since April 1942 are to be used exclusively for the production of food crops. We are therefore listing each type of spray that contains Rotenone and we request that any order for a Rotenone product be accompanied by a statement by the purchaser to the effect that the material will be used in the production of a food crop. This restriction does not apply to material that was made up prior to the regulation. We have considerable quantities of material on hand to which this restriction does not apply. However, when this stock has been sold, all future orders must be filled only according to the regulations.

FERTILIZERS and MANURES

Fertilizers, Vitamins, and Hormone Products

Much the same condition prevails in the sale of fertilizers as in insecticides, etc. Nitrogen, which is very essential for the war effort in the manufacture of explosives, has been forbidden for any use but for the production of food crops. Fertilizers that are being made with nitrogen are limited to no more than 3%. We are fortunate in that we have a considerable amount of nitrogen in stock which we are able to sell for the production of food crops only and the nitrogenous fertilizers under commercial brand names that we offer that are not of an organic nature are also subject to the restriction. Therefore when ordering fertilizers containing nitrogen, kindly furnish us with a statement to the effect that this fertilizer is for use in the production of food crops only.

The DENNISON Improved SEED STARTER SET

Without doubt one of the finest innovations that has ever been presented to garden lovers. The water-proof boxes make ideal seed starting sets—each section sufficient for the sowing of enough of each variety of flowers desired. Each compartment has complete printed directions for the proper depth at which each variety should be planted and a reservoir in the tray provides for scientific moisture control in that the seed trays are never watered over the top but absorb the moisture from the bottom which is the scientific and proper way to water young seedlings.

When the seedlings are large enough to transplant, the compartments may be dismantled and the seedlings removed with a minimum of root loss and injury.

Most attractively packed, the Dennison Improved Seed Starter Set makes an excellent gift for all interested gardeners who are sophisticated enough to know that the best results from garden flowers are obtained from those that are started in advance of the regular season. Outstanding CHRYSANTHEMUMS and GARDEN IRIS

The accent in recent years has been on early blooming Chrysanthemums; for not only are they more satisfactory from a garden point of view, they insure a longer blooming season, inasmuch as they continue blooming until frost. All of the varieties on this page are noted for their extreme earliness, as is Eugene Wander, which is illustrated in color on page 2.

THREE NEW EARLY FLOWERING CUSHION POMPONS (Hybrid Korean)

September Gold. Embodying the early flowering and compact shape of the Cushion Chrysanthemums with the distinct button shape and hardiness of the Koreans. Brilliant golden yellow, very prolific. Height 18 inches.

September Bronze. Same as above. Color as illustrated.

September Cloud. White form of the above two varieties.

Price on the above varieties: 3 for \$1.50; \$5.00 per doz.

Silver Moon. An unusual frost resistant, single white that will add considerably to the late garden. The flowers are enhanced by a mild sweet fragrance. Height 2½ ft. 3 for \$1.75; \$6.00 per doz.

I TWO EXCELLENT IRIS

Christabel. Largest and freest blooming true red garden Iris. Heretofore listed in the very expensive class. We are able to provide strong blooming rhizomes at 3 for \$2.00; \$7.50 per doz.

Eros. A clear, satiny pink as illustrated. Very strong blooming quality. A splendid addition to any Iris collection. 3 for \$1.35; \$3.75 per doz.

Dean Kay Improved

LARGE EARLY FLOWERING CLASS
